1 Intro

This manual is part of deliverable 1 of the Awesomizing P2DX team. The package contains empty modules, except for the coordinator, that can spawn a robot that does nothing yet.

2 Requirements

To Run AP2DX Software you need Java Runtime Enviroment 1.6.

3 How to run

To start the AP2DX Software, you first need to run an USARsim Server. Then change the `sim_address` and `sim_port` in the folder `/jar/coordinator/AP2DX.coordinator.json` to your setup, then run `start.sh` or `start.bat` in that same folder.
